

IMAGINARY GOOGLE ADS CAMPAIGN

Search Campaign Strategy for Imaginary Indian Brand

Student Name:	Varsha	Course name:	Digital Marketing
Project Track:	Google Ads Campaign for Vedam Ayurveda	Date:	July 2026

1. IMAGINARY WEBSITE DESCRIPTION & OBJECTIVES

Platform Name: VedamAyurveda.in

Business Niche: Premium D2C Ayurvedic Skincare & Wellness.

Product Focus: The *Kumkumadi Radiance Face Elixir*—a premium, 100% natural facial oil derived from authentic Ayurvedic formulations targeting skin brightening, anti-pigmentation, and organic daily nourishment.

Campaign Objectives & Selection Rationale

- **Primary Objective: Website Traffic.** As a newly launched homegrown digital platform, generating highly qualified search intent volume to our product landing page is paramount. This initial data collection phase is crucial for building core audiences in Google Analytics before scaling.
- **Secondary Objective:** Increasing brand visibility among the target audience by encouraging users to visit the Vedam Ayurveda landing page, explore its premium Ayurvedic skincare offerings, and build trust through informative website content and optimized user navigation.

2. BID & BUDGET ALLOCATION STRATEGY

To safely pilot this digital advertising strategy in the highly competitive Indian skincare market, the campaign is structured around a steady daily spending ceiling mapped to smart automated bidding.

STRATEGIC PARAMETER	CONFIGURATION VALUE	TACTICAL RATIONALE
Daily Budget Limit	1,500 INR / Day	Allows standard visibility across top search windows in major tier-1 and tier-2 Indian cities without risking rapid budget exhaustion.
Total Run Duration	14 Days (Simulated)	Establishes a solid two-week evaluation timeline to smooth out differences between weekday search behavior and weekend online shopping peaks.
Total Campaign Budget	21,000 INR Total Allocation	Provides a balanced, structured financial setup tailored for a realistic capstone evaluation.
Bidding Strategy	Maximize Clicks	Automates auction-level bidding to deliver the maximum possible visitor traffic to our storefront within the set budget limits.

3. KEYWORD THEMES & TARGET STRATEGY

The campaign keyword framework isolates commercial and informational intent to avoid broad matching mistakes, ensuring low Cost-Per-Click (CPC) and highly relevant traffic.

Intent-Driven Keyword Theme Matrix

[kumkumadi tailam face oil]

[best ayurvedic oil for glowing skin]

[organic anti pigmentation oil]

"natural skin brightening serum"

"ayurvedic face oil brand"

+pure +kumkumadi +oil

Match Type Breakdown

- **Phrase Match (" "):** Captures highly relevant searches containing our core ideas (e.g., triggering for queries like *best organic anti pigmentation oil online*).
- **Exact Match ([]):** Locks down traffic on hyper-specific commercial terms like *[kumkumadi tailam face oil]* where the user has high purchasing intent.
- **Negative Keywords:** free, cheap, chemical, side effects, manufacturing formula, home remedies. This prevents budget loss on non-commercial, informational, or low-cost search variations.

4. CAMPAIGN SETUP & TARGETING CONFIGURATION

The campaign runs exclusively on the **Google Ads Search Network** to capture active high-intent consumers looking for immediate skincare solutions.

- **Campaign Type:** Search Campaign
- **Geographic Location Filtering:** India (With bid adjustments prioritizing Tier 1 & Tier 2 urban hubs: Mumbai, Delhi-NCR, Bengaluru, Hyderabad, Chennai, Pune, and Kolkata).
- **Demographic Focus:** Female , Ages 25-45 (Capturing working professionals and quality-conscious lifestyle consumers).
- **Language Targeting:** English, Hindi
- **Ad Network:** Google Search Network, allowing the ads to appear on Google Search results for users actively searching for relevant Ayurvedic skincare products.

5. AD CONTENT CREATION (RESPONSIVE SEARCH AD SPEC)

Google's machine learning dynamically rotates these headlines and descriptions to display the highest-converting copy combinations to each individual prospect.

- Restore your skin's natural glow with Vedam Kumkumadi Elixir. Made with authentic Kashmiri saffron to target pigmentation and dark spots naturally. Order today!

- 100% natural, chemical-free Ayurvedic formula engineered for deep skin rejuvenation and radiance. Suitable for all skin types. Enjoy free shipping pan-India.

Extensions Configured: Sitelinks ("*Discover Our Ingredients*", "*Take The Dosha Quiz*"), Callouts ("*Cruelty Free & Vegan*", "*100% Certified Ayurvedic*").

6. FINAL REPORTING & STRATEGIC REFLECTION

Anticipated Campaign Performance Metrics

To accurately judge campaign health, our practice baseline metrics are calibrated against typical performance data for the Indian D2C Beauty & Personal Care sector:

- **Expected Click-Through Rate (CTR):** 4.00% – 6.00% (reflecting high natural demand for targeted clean Ayurvedic products).
- **Target Average CPC:** ₹25 - ₹45 INR (carefully managed using precise match keyword selections).
- **Conversion Rate Benchmark:** 2.50% registration rate expected for our digital skin-guide lead magnet.

Challenges Faced & Solutions Applied

The Broad Match Pitfall: The main challenge during planning was avoiding Google's push for broad match keywords. Broad matching on keywords like *ayurvedic oil* would accidentally show our ads for irrelevant queries like *ayurvedic hair oil for growth* or *cooking oil benefits*, quickly draining the budget.

The Solution: The strategy avoids pure broad match keywords completely. By pairing phrase and exact match structures with strict negative keyword filters for terms like "hair" or "cooking", we ensure every rupee spent drives targeted skincare buyers.

Landing Page URL Accessibility: Initially, the landing page for the campaign was developed on a local WordPress environment (localhost). Since Google Ads only accepts publicly accessible URLs as landing pages, the localhost URL could not be used as the campaign's final destination. This prevented the campaign from using the website for ad creation and testing.

The Solution: To resolve this issue, a new landing page was created and published using Google Sites. This provided a valid public URL that met Google Ads' requirements. The published Google Site was then used as the campaign landing page, allowing the campaign setup to proceed successfully while maintaining a professional user experience.

Customer Acquisition Bidding Restriction: While configuring the campaign, enabling the "Only bid for new customers" option generated a warning indicating that the campaign would not be eligible to run. Since the project was based on an imaginary brand, the required customer data was unavailable, preventing the use of this feature.

The Solution: The customer acquisition setting was disabled, and the campaign was configured using the Maximize Clicks bidding strategy. This allowed the campaign to focus on attracting qualified website traffic while ensuring the campaign remained fully functional.

Sitelink Asset Configuration: During campaign setup, the sitelink assets were repeatedly removed after being saved. This occurred because all sitelinks initially directed users to the same homepage URL, preventing them from being retained properly.

The Solution: To resolve this issue, separate landing pages were created for key sections of the website, including **Our Ingredients, Take the Dosha Quiz, Shop Radiance Elixir, and Our Happy Customers**. Each sitelink was linked to its respective page, resulting in a better website structure and a more complete campaign setup.

Audience Targeting Optimization: During the initial campaign setup, the selected audience was extremely broad, with an estimated reach of over **200 million** users. This audience size was not suitable for a premium Ayurvedic skincare brand and could have resulted in lower-quality traffic.

The Solution: The audience was refined by targeting **women aged 25–45** living in **Tier-1 Indian cities**. Relevant interests such as **Ayurveda, Natural Skincare, Organic Beauty, and Premium Beauty Brands** were added while broader interests were removed. This reduced the audience size to a more focused and relevant segment, improving the campaign's targeting strategy.

Negative Keyword Optimization: One of the key challenges was preventing the campaign from attracting irrelevant clicks that could waste the advertising budget. Search queries related to jobs, wholesale suppliers, DIY skincare recipes, and medical treatments were not aligned with the campaign's objective of attracting potential customers.

The Solution: A comprehensive negative keyword list was created and applied at the campaign level. Keywords related to employment, wholesale inquiries, manufacturing, home remedies, research, and other non-commercial searches were excluded. This helped improve traffic quality and ensured that the ads reached users with stronger purchase intent.

Key Marketing Insights: This project demonstrated that the success of a Google Ads campaign extends beyond creating compelling advertisements. It requires a strategic combination of precise audience targeting, relevant keyword selection, optimized landing pages, and well-structured ad assets to attract high-intent users. Additionally, continuous optimization through negative keywords, audience refinement, and campaign settings plays a vital role in improving traffic quality, maximizing budget efficiency, and achieving meaningful marketing outcomes.

9. KEY LEARNINGS

This project provided practical experience in planning and configuring a Google Ads Search Campaign for a premium skincare brand. Throughout the campaign development process, the following key learnings were achieved:

- Gained hands-on experience in creating and structuring a Google Ads Search Campaign from scratch.
- Learned how to conduct keyword research and implement negative keywords to improve campaign relevance and reduce irrelevant traffic.
- Developed an understanding of audience targeting by refining demographics, locations, and interests to reach high-intent users.
- Learned the importance of creating a dedicated landing page and ensuring compatibility with Google Ads requirements.
- Understood how ad assets such as sitelinks, callouts, structured snippets, and lead forms enhance ad visibility and user engagement.
- Gained practical knowledge of campaign optimization through bidding strategy selection, budget management, and audience refinement.
- Improved skills in writing compelling ad copy that aligns with brand positioning and user search intent.
- Enhanced problem-solving abilities by identifying campaign setup challenges and implementing effective solutions throughout the project.

10. CONCLUSION

This project successfully demonstrated the end-to-end process of planning, designing, and configuring a Google Ads Search Campaign for **Vedam Ayurveda**, a premium Ayurvedic skincare brand. From defining campaign objectives and conducting keyword research to audience targeting, ad creation, landing page development, and campaign optimization, every stage was carefully planned to align with the brand's marketing goals.

Throughout the project, practical challenges such as landing page accessibility, audience refinement, sitelink configuration, and campaign setup were identified and effectively resolved. These experiences reinforced the importance of strategic planning, continuous optimization, and creating a seamless user journey between advertisements and landing pages.

Overall, this project enhanced my understanding of Google Ads, digital marketing strategies, campaign management, and performance optimization. It also strengthened my ability to apply theoretical concepts in a practical environment, providing valuable hands-on experience that will support future digital marketing projects and professional growth.
